## The Database Query Tool

The UTB is a fully functioning Query Tool giving you access to your database using ODBC connections. A graphical user interface means that you can simply point and click your way to complex SQL statements or use the SQL editor to write your query direct. The UTB has been optimised for massive databases, capable of dealing with MILLIONS of rows and thousands of columns. The UTB will deliver data to you at blistering speed – the likes of which you've never seen before. utbDirect was originally developed around the needs of the ERP marketplace, where databases are run on anything from Microsoft SQL server, IBM DB2 through to massive parallel Oracle databases. These systems typically service many hundreds, sometimes thousands of users. Their databases are simply GIGANTIC running into MANY TERABYTES of disk space. Unity brings you the ultimate Query Tool which is being used by these organisations. Stop looking at the hour glass and start seeing your data !!

UTB deploys a simple, fast and easy-to-use interface. It allows you to very quickly see all the tables in your system, or filter to a specific set of tables. If you query your database on a frequent basis you will find you can do your job quicker with UTB than with any other product you've seen. Queries can be built and saved quickly. Tables can NOT be updated.

UTB is not packed to the brim with complex, confusing or useless features. It is a simple to use, super efficient query tool. It gives sufficient functionality for ANY database professional or end user to build and execute SQL queries against their databases.

UTB was designed by real users to provide an easy-to-use front-end to their MASSIVE ERP databases. We have ensured that you get a simple, fast and easy-to use interface. UTB provides you with the information you want with minimal clicking, typing and hunting through menus. We have taken great effort to have clean and uncluttered windows. Other tools may be "prettier" than UTB, but none will allow you to do your job quicker.

## UTB has many benefits...

- Blistering Performance
- Connect to ANY ODBC Data Source
- See Tables and Views
- Filter the Schema
- Unique QBE (Query by Example) column filtering facility
- Drag and Drop SQL builder
- Graphical Table Join
- Convert to Crystal Reports
- Export results to many common formats
- SQL Editor, Enter Raw SQL Code
- Powerful Query Builder, a intuitive graphical user interface for building complex SQL queries
- No SQL knowledge is required, all functions are point and click
- Read Only, All functions are READ ONLY, no update capabilities exist
- Work with huge data bases – UTB has been optimised for the REAL world were tables can have over a MILLION rows.
- Save, Re-Use and Share.. save the query definition for later re-use or share with other colleagues
